Plots for variables with sig. difference between profiles

Error bars represent 95% confidence intervals

3.2.4.2 categorical variables

Chi-square test was used for categorical variables. if an observed frequency was less than 5 in a single cell then Fisher's Exact test was used.

Table 7

Categorical variables (Chi-square): Differences between profiles on each variable outside model

Plots for variables with sig. difference between profiles

Error bars represent 95% confidence intervals

5.1.4.2 categorical variables

Table 19

Categorical variables (Chi-square): Differences between profiles on each variable outside model

var	df	chi_sq	p.value
Children	3	22.3	<.001
CountryLive	9	157.9	<.001
Elderly	3	1.3	0.738
ElderlyLive	3	2.0	0.574
Gender	3	10.5	0.015
Job	3	2.6	0.463
Layoff	3	2.8	0.432
LeaveHome	3	35.9	<.001
MaritalStatus	9	153.2	<.001
Workessential	6	13.3	0.039

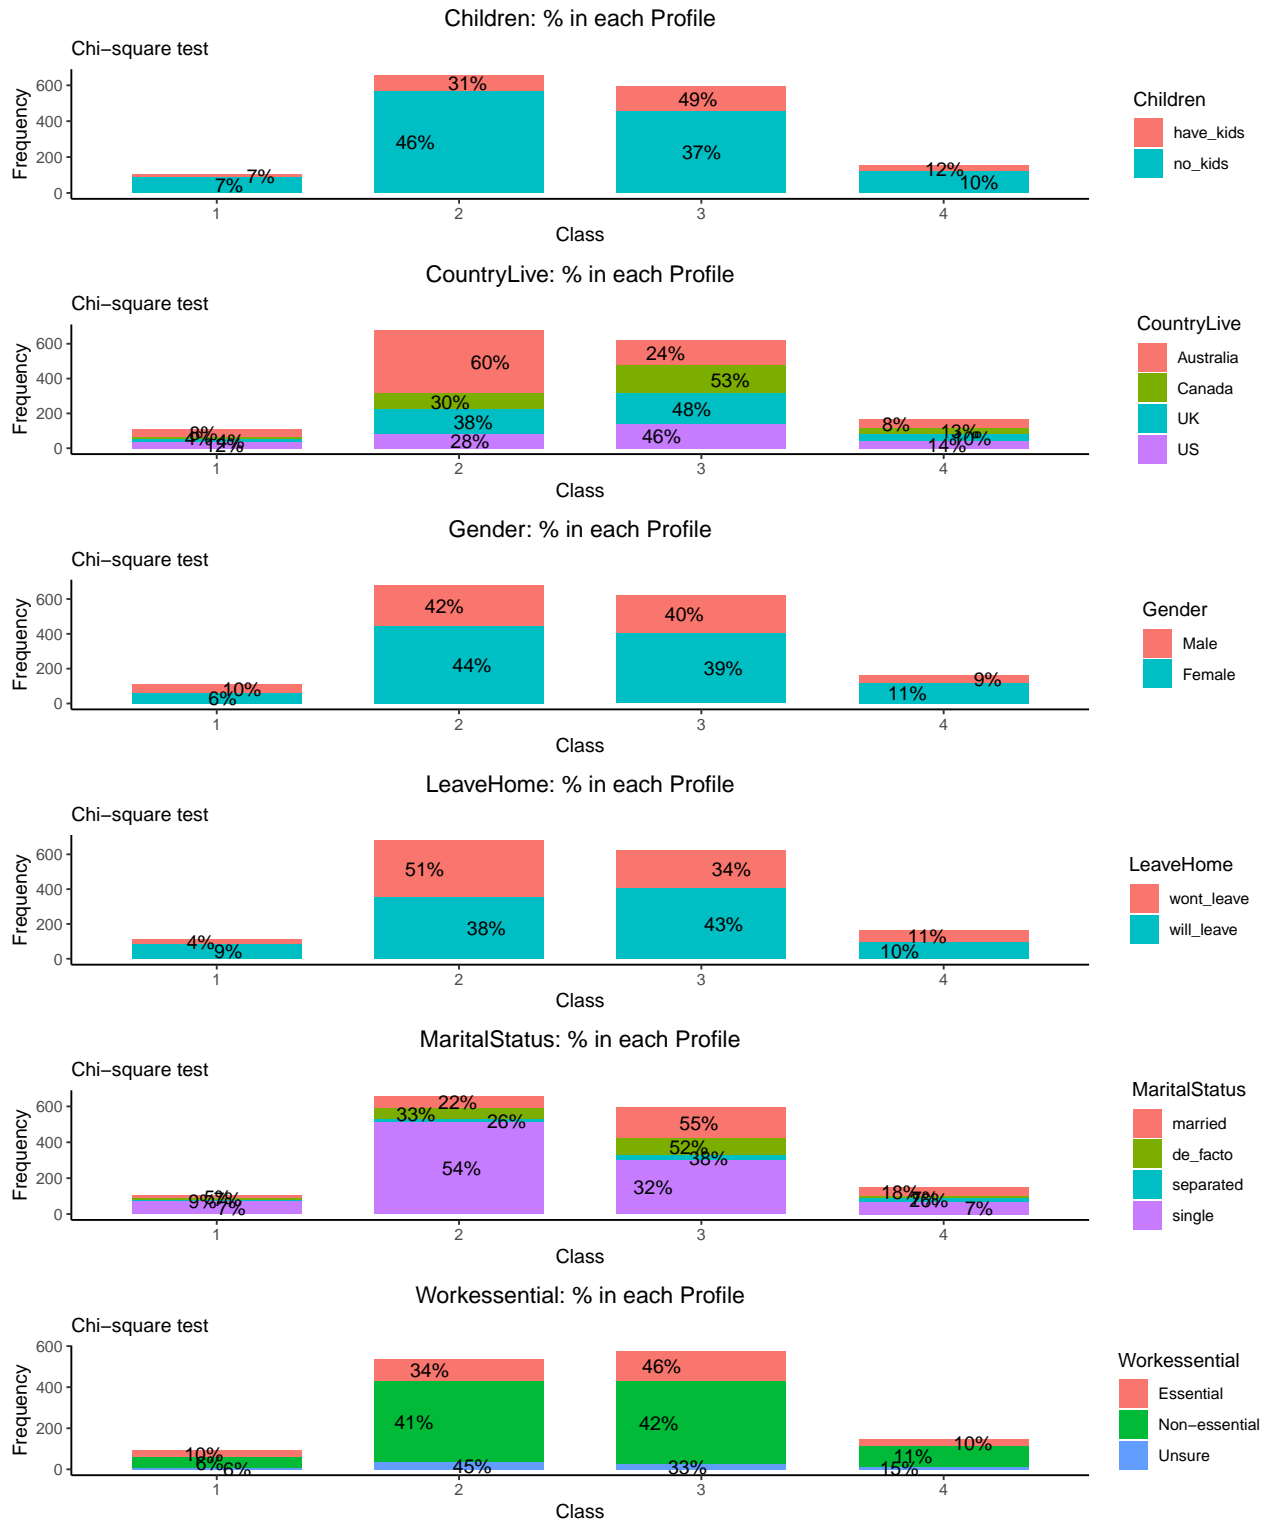

Table 20
 Categorical variables (Fisher's exact): Differences between profiles on each variable outside model

var	p.value
LossofJob	0.945
Wherework	<.001

6 List of goodness of fit indices

A list and description of the GFI that can be computed for LPA models. - LogLik: Log-likelihood of the data, given the model.

- AIC: Aikake information criterion; based on -2 log-likelihood, and penalized by number of parameters.
- BIC: Bayesian information criterion; based on -2 log-likelihood, and penalized by number of parameters adjusted by sample size.
- Entropy: A measure of classification uncertainty, reverse-coded so that 1 reflects complete certainty of classification, and 0 complete uncertainty (see Celeux & Soromenho, 1996).
- BLRT: bootstrapped likelihood test.
- BLRT p-value: p-value for the bootstrapped likelihood ratio test.
- AWE: Approximate weight of evidence; combines information on model fit and on classification errors (Celeux et al., 1997).
- CAIC: Consistent Aikake information criterion; based on -2 log-likelihood, and penalized by number of parameters adjusted by sample size.
- CLC: Classification Likelihood Criterion; based on -2 log-likelihood, and penalized by the entropy (Biernacki, 1997).
- KIC: Kullback information criterion; based on -2 log-likelihood, and penalized by 3 times the number of parameters -1 (Cavanaugh, 1999).
- SABIC: Sample size-adjusted Bayesian information criterion (Sclove, 1987).
- ICL: Integrated completed likelihood (Biernacki, Celeux, & Govaert, 2000).
- Prob. Min.: Minimum of the diagonal of the average latent class probabilities for most likely class membership, by assigned class. The minimum should be as high as possible, reflecting greater classification certainty (cases are assigned to classes they have a high probability of belonging to; see Jung & Wickrama, 2008).
- Prob. Max.: Maximum of the diagonal of the average latent class probabilities for most likely class membership, by assigned class. The maximum should also be as high as possible, reflecting greater classification certainty (cases are assigned to classes they have a high probability of belonging to).
- N Min.: Proportion of the sample assigned to the smallest class (based on most likely class membership).
- N Max.: Proportion of the sample assigned to the largest class (based on most likely class membership).
